Summary of Milestone 3 ZOOM meeting review with Prof. Petkovic and plans for further development

Team number: 5

Meeting date: 4/21/21

Summary of feedback on UI

- Home
    - Logo should be used to navigate to homepage, not a home button.
    - There should be a tab to let drivers and restaurant owners access the part of the site for them.
    - SFSU or San Francisco should be referenced in our tagline.
    - Banner should be smaller.
    - Navbar should be fixed at the same place for all places.
    - The "Learn More" button is unnecessary because nobody will ever use it.
    - Reference SFSU more in our language.
    - Do not hardcode search values.
        - Database should have an approved list of data types for types of cuisine.
- Search
    - Need to ensure a minimum amount of information for a search such as how expensive it is, its location, and restaurant name.
- Restaurant Menu
    - Should have info boxes for items that are only large enough to contain the information they show.
    - "Add" buttons should be "Add To Cart" or something similar.
- Restaurant Registration Page
    - Change "Register your restaurant" to "Register as restaurant owner" or something similar.
    - Checkbox to accept terms of service should be closer to its accompanying text.
- Focus more on P1 deliverables. Cut down on coding.

Summary of feedback on code and architecture

- Coding style looks fine.
- More comments are needed, especially header comments for components.

● Model View Controller (MVC) followed

Summary of feedback on github usage

● Work seems to be skewed towards a couple of members.
● Github commit names need to be more descriptive.
● The project structure may need some work as server code is not in the server backend folder.
● Branch usage can be better, only a few branches are used. This makes it hard to split up tasks.

Summary of feedback on DB

● Database looks fine and well developed.
● Table names are OK
● There should be descriptions of each restaurant in the database.

Summary of feedback on teamwork

● Work seems to be skewed towards a couple of members.

Any other comments and issues

Agreed upon P1 list of features for final delivery which constitute product plan.

1) Unregistered User:
   a) Unregistered users shall be able to create an account and log in
   b) Unregistered users shall be able to navigate to use search feature
2) Registered User:
   a) Shall have all access of Unregistered user plus those below
   b) Registered users shall be able to order food (pickup or delivery)
   c) Registered users shall be able to choose delivery times and pick up locations
3) Restaurant Owners:
   a) Owners shall be able to upload restaurant info to our service
   b) Owners shall be able to manage their menu
4) Restaurants:
   a) Shall be able to fulfill orders
   b) Restaurants shall be able to access their orders
5) Deliverer:

      a) Shall be able to privately see and use the GPS system to reach their given destination.

      b) Shall see list of orders that need deliverers

      c) Shall be given an address to pick up food at and an address to deliver food to

6) Admin:

      a) Admins shall have an easy to access list of the restaurants that are applying to join the service.

      b) Admins shall be required to approve restaurant registrations before they go live.

      c) Admins shall have the ability to remove restaurants or users from the service

Plan: To fix the problems with our UI, 2 team members will be in charge of applying necessary changes mentioned above, this will be done within a week. We will be doing code reviews to make sure that team members are commenting their code more and sticking to our coding practices. Some team members have very few commits compared to others so in the coming milestones, those with less commits will be given more specific tasks to complete.
